Objective of Expert Lecture

The objective of this expert lecture is to introduce the students about the Agile technology used in software companies.

Introduction:

There are many tools and techniques in today's world that can help you maximize the value of the output produced. Among the many options available, Agile is one of the most commonly used. This is because of its ability to enable teams to work in small increments and respond to changes quickly. Agile is an iterative way of managing projects and developing software that makes it easier for teams to deliver value to their customers more quickly and effectively. An agile team is to deliver small but consumable increments of work rather than wagering everything on a "big bang" launch. Agile methodologies enable organizations to deliver value to customers faster and with fewer complications by systematically managing projects and developing software in an iterative fashion. As a result of continuously evaluating requirements, plans, and results, teams are able to respond to change in a timely manner.

Session by Mr. Shanmukh S. Balkunde

He explained the advantages of using Agile methodology in software companies.

Following topics are covered in the seminar
