Objective of Webinar

A great deal of value is involved to publish a high-quality research paper. Writing a scientific research paper is an option for undertaking short period research investigation. Ph.D. research scholars are required to publish minimum of 2 research papers in refereed journals before the submission of the thesis. Some of the UG/PG students are also interested in publishing the papers to get the financial assistance for doing masters/Ph.D. in foreign countries. A substantive research effort is involved in writing a scientific research paper by a large number of researchers and by industry experts. However, the several researchers do not know how to write a scientific research paper with the result that a large number of papers are being rejected by the peer reviewed quality journals. Writing a scientific research paper is an art as well as a sophisticated knowledge-based skill. Very few among the academia understand the finer nuances involved in writing a research paper which is publishable in a high-quality refereed journal. This webinar is expected to fill up this gap to some extent.

Resource Person:

Dr. Jayakrishna is an Associate professor in the School of Mechanical Engineering at the Vellore Institute of Technology University, India. Dr. Jayakrishna's research is focused on the design and management of manufacturing systems and supply chains to enhance efficiency, productivity and sustainability performance. More recent research is in the area of developing tools and techniques to enable value creation through sustainable manufacturing, including methods to facilitate more sustainable product design for closed-loop material flow in industrial symbiotic setup, and developing sustainable products using hybrid bio composites. He has mentored undergraduate and graduate students (1 M. Tech Thesis and 24 B. Tech Thesis) which have so far led to 45 journal publications in leading SCI/ SCOPUS Indexed journals, 22 book chapters, and 85 refereed conference proceedings, 7 books in CRC/Springer Series. Dr. Jayakrishna's team has received numerous awards in recognition for the quality of the work that has been produced. He teaches undergraduate and graduate courses in the manufacturing and industrial systems area and his initiatives to improve teaching effectiveness have been recognized through national awards. Objectives of Course

The objective of this course is designed to give the student an introduction to the SQL database language, and to databases - their purposes and terminology.

Introduction:

A database is an organized collection of data. It is the collection of schemas, tables, queries, reports, views, and other objects. The data are typically organized to model aspects of reality in a way that supports processes requiring information, such as modeling the availability of rooms in hotels in a way that supports finding a hotel with vacancies.

A database management system (DBMS) is a computer software application that interacts with the user, other applications, and the database itself to capture and analyze data. A general-purpose DBMS is designed to allow the definition, creation, querying, update, and administration of databases.

SQL is a database computer language designed for the retrieval and management of data in a relational database.
